

**This release is for Anytone D878SU and D878SV single band radio use.**

**How to know your firmware version?**

Press 7  (Menu) key to enter the menu, press  key to the Device Info and enter into the menu to check the model name.

**Model Name: D878S**

**Freq Range:400-480** --- Please use the firmware D878SU\_Vx.xx for updating the radio.

**Freq Range:136-174** --- Please use the firmware D878SV\_Vx.xx for updating the radio.

If you use wrong firmware for updating, the radio will remind “version error”. After load into correct firmware, it will work fine.
